# **Determining the Correct Hitch for Your Application**

Use as a guideline only for initial hitch options. Tongue weight and RV GVWR must be verified to ensure proper hitch set up. Remember, optional equipment, additional cargo in both vehicle and RV, Tow Vehicle GCWR, Tow Vehicle weight rating, and RV GVWR must be accounted for when determining the hitch. You are responsible for your purchase and operation of your hitch.

# **Considerations for Toy Haulers**

In specific toy hauler instances various loading configurations may effect performance without properly calucating the tongue weight.

Tongue Weight - ((Toy Weight \*25%) + Fuel Weight) = Actual Tongue Weight

**Example:** If the trailer tongue weighs 1000 lbs., loaded, and a toy is loaded behind the rear axle, weighing 1000 lbs., and the auxiliary fuel tank is fully loaded with 30 lbs. of fuel, the Actual Tongue Weight would equal 720 lbs.

1000 - ((1000\*25%) + 30) = 720

Tongue Weight - ((Toy Weight \*12.5%) + Fuel Weight) = Actual Tongue Weight

Example: If the trailer tongue weighs 1000 lbs., loaded, and a toy is loaded with any portion over the rear axle, weighing 1000 lbs., and the auxiliary fuel tank is fully loaded with 30 lbs. of fuel, the Actual Tongue Weight would equal 845 lbs.

1000 - ((1000\*12.5%) + 30) = 845
